ANTI-ICING / DE-ICING AGENTS & CORROSION OF METALLIC COMPONENTS

• Road anti-icing / de-icing agents used in northern states, when splashed on your vehicle, continue to absorb moisture from the air even after they have dried. This can facilitate corrosion of metallic components, such as HWH® jacks.

• To help reduce corrosion after exposure to road anti-icing / de-icing agents used in northern states, thoroughly wash HWH® components with warm soapy water.
